US MILITARY PLANS TO "OWN THE WEATHER" BY 2025

Abstract: In 2025, US aerospace forces can "own the weather" by capitalizing on emerging technologies and focusing development of those technologies to warfighting applications. Such a capability offers the warfighter tools to shape the battlespace in ways never before possible. It provides opportunities to impact operations across the full spectrum of conflict and is pertinent to all possible futures. The purpose of this paper is to outline a strategy for the use of a future weather modification system to achieve military objectives rather than to provide a detailed technical road map.

A high-risk/high-reward endeavor, weather modification offers a dilemma not unlike the splitting of the atom. While some segments of society will always be reluctant to examine controversial issues such as weather modification, the tremendous military capabilities that could result from this field are ignored at our own peril. From enhancing friendly operations or disrupting those of the enemy via small-scale tailoring of natural weather patterns, to complete dominance of global communications and counter-space control, weather modification offers the warfighter a wide range of possible options to defeat or coerce an adversary.

Technology advancements in five major areas are necessary for an integrated weather modification capability: (1) advanced nonlinear modeling techniques, (2) computational capability, (3) information gathering and transmission, (4) a global sensor array, and (5) weather intervention techniques. Some intervention tools exist today and others may be developed and refined in the future.

Current technologies which will mature over the next thirty years will offer anyone who has the necessary resources the ability to modify weather patterns and their corresponding effects, at least on the local scale. Current demographic, economic, and environmental trends will create global stresses that provide the impetus necessary for many countries or groups to turn this weather modification ability into a capability. In the US, weather modification will likely become a part of national security policy

with both domestic and international applications. Our government will pursue such a policy, depending on its interests, at various levels. These levels could include: unilateral actions, participation in a security framework such as NATO, membership in an international organization such as the UN, or participation in a coalition.

Assuming that in 2025 our national security strategy includes weather modification, its use in our national military strategy will naturally follow. Besides the significant benefits an operational capability would provide, another motivation to pursue weather modification is to deter and counter potential adversaries.

In this paper we show that appropriate application of weather modification can provide battlespace dominance to a degree never before imagined. In the future, such operations will enhance air and space superiority and provide new options for battlespace shaping and battlespace awareness. The technology is there, waiting for us to pull it all together; in 2025 we can "own the weather".

Shields (Source: Intelligence, no. 93, 15 February 1999; from the paper, "2025: Weather as a Force Multiplier", presented by military personnel to the US Air Force in August 1996)

MIND-CONTROL SLAVERY & THE NEW WORLD ORDER

Dear Duncan: In your last editorial [NEXUS 6/02], you wrote: "I need to say a few words about Uri Dowbenko's article on NWO Mind Control. The subject is not pleasant; in fact, I had to do some serious soul-searching about whether I should publish such material... I decided to publish, but have still had to edit it heavily. You will all probably flinch and ask yourselves whether it could possibly be true."

Two years ago, someone anonymously sent me a copy of *TranceFormation of America* [see review, NEXUS 3/04], presumably because I had a fairly high profile locally as a human rights activist with Amnesty International. Despite my daily exposure to information about genocide, torture and other gross human rights violations, Cathy O'Brien's story made me feel literally sick to the stomach. I would go as far as to caution sensitive individuals against reading the book, as the information becomes lodged in the emotional body and is extremely difficult to integrate.

Like you, I went through a process of soul- and Internet-searching to determine whether the book had any basis in fact or was just a sick fantasy. A search engine led me to an article by Kathleen Sullivan, that included her e-mail address, and I got in touch with her. It turned out that not only had she been through a similar experience to O'Brien, but she knew both her and co-author/'de-programmer' Mark Phillips. My extensive personal correspondence

deBriefings

with Kathleen over the past two years has confirmed beyond any doubt that she is speaking the truth.

Kathleen acknowledges that the deliberate and systematic fragmentation of her mind that she experienced during the horror of her 'training' sometimes makes it difficult for her to discern fact from fiction in her recall of past events. Fortunately she has been gifted with an incredible strength of will that has enabled her to conduct a rigorous and ongoing psychological self-examination and become a source of support to other mind-control victims and their families. (See <<http://parc-vramc.tierranet.com>>.)

Researching the mind-control issue is like opening the lid of Pandora's box. As Uri said in his excellent article, to create Multiple Personality Disorder by conscious intent is nothing less than a depraved atrocity. To realise that respected public figures are capable of such evil, forces one to question the very basis of one's worldview. As the John Lohengard character said in the fictional conspiracy TV series, *Dark Skies*: "There's another reality out there that most people never find out about. But when you see it, it changes you forever."

Mind-control programming is an extremely disturbing symptom of our dysfunctional society. If elements of the power elite can perpetrate these kinds of abuses on children and other innocent people and get away with it, something is seriously wrong with the way our society works. In my view, the challenge of our time is to (i) educate ourselves about the underlying causes of our social, political, economic and environmental problems, (ii) build a strong grassroots resistance movement to halt the slide towards global totalitarianism, and (iii) develop a viable strategy for creating a society that is just, genuinely democratic and ecologically sound.

My personal contribution to this effort—motivated in part by the information that Kathleen has shared with me—has been to set up a London Human Rights Forum. This was launched on 15 February with a talk by Susan George (a leading campaigner against the Multilateral Agreement on Investment) on "How Corporate Globalisation Destroys Human Rights". (For further information about the London Human Rights Forum, see <<http://privatewww.essex.ac.uk/~mmollm/lhrf.htm>>.)

As Susan made clear, the rise to power of the transnational corporations and financial speculators in the increasingly globalised capitalist economy is one of the main underlying causes of human rights violations and environmental destruction. I'd like to draw your readers' attention to three initiatives that aim to arrest this new imperialism.

The Inter-Continental Caravan is a project that was conceived in India by the Karnataka State Farmers Association (KRRS), a Gandhian movement committed to non-violent civil disobedience against corporate power. With the help of the People's Global Action network, 500 activists from India and other countries in the south will travel around Europe in a convoy of buses

during May/June to express their opposition to the TNCs and financial institutions. (See <<http://stad.dsl.nl/~caravan>>.)

Timed to coincide with the start of the G8 summit of world leaders in Köln, Germany, and the end of the Inter-Continental Caravan, 18 June 1999 has been declared "a day of protest, action and carnival in financial centres across the globe".

To quote the publicity material for the event: "If you say the organisation of society and its domination by unaccountable tyrannies is improper and unjust...you have to consider what the alternatives are and how you move towards them. And those are not trivial matters; they require organised popular movements which think things through, which debate, which act, which experiment, which try alternatives, which develop the seeds of the future in the present society." (See <<http://www.gn.apc.org/june18>>.)

The Citizens Public Trust Treaty is a proposed United Nations General Assembly Resolution designed to counteract corporate

globalisation. It states: "We call upon the nations of the world to ensure the rights of present and future generations to genuine peace, social justice and ecological integrity by implementing the principles of this Treaty." To read the document and sign the petition, see <<http://www.gn.apc.org/negreens/cptt.htm>>.

Finally, a plug for my article, "Y2K in Context", available on <http://www.provide.net/~aelewis/y2ko/y2ko_504.htm>, which attempts to relate the "millennium bomb" to some of the issues touched on above.

Bravo for having the courage to print Uri's important article.

US NAVY'S POLITICAL ASSASSINATIONS PROGRAM

A US Navy psychologist has admitted at a NATO conference to the existence of a training program for killers. Lieutenant Commander Thomas Narut, stationed at the US Regional Medical Center in Naples, Italy, claims that the Office of Naval Intelligence has taken convicted murderers from military prisons, used behaviour modification techniques on them, and then relocated them in American embassies throughout the world.

Dr Narut divulged the information at an Oslo NATO conference of 120 psychologists from the 11-nation alliance. Just prior to that time, the US Senate Intelligence Committee had censured the CIA for its global political assassination plots, including plots against Fidel Castro.

According to Dr Narut, the US Navy was an excellent place for researchers to find "captive personnel" whom they could use as guinea pigs in experiments. The Navy provided all the funding necessary, he said.

In a question-and-answer session with reporters from many

... 18 June 1999 has been declared "a day of protest, action and carnival in financial centres across the globe".

deBriefings

nations, Dr Narut revealed how the US Navy was secretly programming large numbers of assassins. He said that the men he had worked with for the Navy were being prepared for commando-type operations as well as covert operations in US embassies worldwide. He described the men who went through his program as "hit men and assassins" who could kill on command.

Careful screening of the subjects was accomplished by Navy psychologists through the military records, and those who actually received assignments where their training could be utilised were drawn mainly from submarine crews and paratroops, and many were convicted murderers serving military prison sentences. Several men who had been awarded medals for bravery were drafted into the program.

The assassins were conditioned through "audiovisual desensitisation". The process involved the showing of films of people being injured or killed in a variety of ways, starting with very mild depictions and leading up to the more extreme forms of mayhem. Eventually the subjects would be able to detach their feelings, even when viewing the most horrible of films. The conditioning was most successful when applied to "passive-aggressive" types, and most of these ended up being able to kill without any regrets. The prime indicator of violent tendencies was the Minnesota Multiphasic Personality Inventory.

The potential assassins also underwent programming to create prejudicial attitudes, in order that they would think of their future enemies, especially the leaders of these countries, as sub-human. They were presented with films and lectures that demeaned the culture and habits of the people of the countries where it had been decided they would be sent.

Dr Narut knew of two Navy programming centres: the Neuropsychiatric Laboratory in San Diego and the US Regional Medical Center in Italy, where he worked.

After his NATO lecture, Dr Narut disappeared and could not be located. Within a week of so of the lecture, the Pentagon issued an emphatic denial that the US Navy had "engaged in psychological training or other types of training of personnel as assassins". They disavowed the programming centres in San Diego and Naples and stated that they were unable to locate Narut. However, they did provide confirmation that he was a staff member of the US Regional Medical Center in Naples.

Dr Alfred Zitani, an American delegate to the Oslo conference, did verify Narut's remarks, as published in the *Sunday Times*.

Some time later, Dr Narut surfaced in London and recanted his remarks, stating that he was "talking in theoretical and not practical terms". Shortly thereafter, the US Navy headquarters in London issued a statement indicating that Dr Narut's remarks at the NATO conference should be discounted because he had "personal problems". Dr Narut never made any further public statements about the program.

During the NATO conference in Oslo, Dr Narut had remarked that the reason he was divulging the information was because he believed it was coming out anyway. The US Navy psychologist was referring to a congressional subcommittee's disclosures, which were then appearing in the press, concerning various CIA assassination plots. However, what Dr Narut had failed to realise at the time was that the Navy's assassination plots were not destined to be revealed to the public at that time.

GENETIC FOOD SCARE SCIENTIST IS VINDICATED

The scientist who was publicly humiliated over claims that genetically modified "Frankenstein" food may be harmful has been proved right after all. Hungarian-born Dr Arpad Pusztai, a world expert in lectins, was stripped of his post at a research institute in Scotland and was described as "muddled" by his superiors after he referred to experiments in which rats had been damaged when fed genetically altered potatoes.

But the *Mail on Sunday* has learned that rats *did* suffer shocking internal damage, and that a leading pathologist who re-examined their remains has confirmed Dr Pusztai's findings. These revelations will place a question mark over the future of Dr Pusztai's former boss, Professor Philip James, who ousted him from the research program and is now being tipped as head of the Government's new Food Standards Agency, due to be formed in April next year.

Dr Pusztai, 68, lost his job at the British Government-funded Rowett Research Institute in Aberdeen, Scotland, after he told Granada TV's *World in Action* of his studies. He said he found it "very, very unfair to use our fellow citizens as guinea pigs". The interview last August sparked a fierce debate on the potential dangers of genetically engineered food.

Yet Dr Pusztai was discredited on the basis of getting his facts badly confused by apparently referring to the wrong experiment.

GREEK MYTHOLOGY

deBriefings

Professor James issued statements to the press, saying that Dr Pusztai "would have to retire" because he'd "got it wrong" by suggesting the rats in question had been fed potatoes modified with genes from a bean—when, in fact, these particular experiments had never been carried out. The apparent mix-up, made amid the glare of TV publicity, cost Dr Pusztai his reputation.

But Dr Pusztai had conducted other crucial experiments using potatoes altered by another gene—and these tests demonstrated a worst-case scenario. The tests were carried out on rats that were fed potato altered to carry a gene from snowdrops. This enabled the vegetable to make a chemical known as GNA lectin, which would protect it from insect and worm damage. However, the effect was devastating.

Dr Pusztai's results—contained in a report to Professor James and the Scottish Office—detail liver damage, even in rats fed cooked genetically-modified potatoes for 10 days. His findings reveal that, in most animals, "highly significant changes" occurred in the weights of some or most of the rats' vital organs and that immune system organs, like the spleen and thymus, were "frequently affected".

Dr Pusztai's conclusions have now been backed by more than 20 scientists from 13 countries, in a co-ordinated statement issued in early February. An independent analysis has been conducted by consultant pathologist Dr Stanley Ewen, of Aberdeen University, who examined the preserved rats' organs. Neither Dr Ewen nor Dr Pusztai will discuss their findings, though they may make them public by late February.

The doctors' conclusions are a setback for the multibillion-pound biotechnology industry which is seeking licences worldwide to grow high-volume crops that resist herbicides. At the start of the experiment, it was thought that snowdrop lectin was unlikely to produce harmful effects, so it would have been considered suitable for commercial development. But now the revelations have thrown GM foods research into disarray.

LA NIÑA'S GLOBAL WEATHER EXTREMES

Camp Springs, Maryland, 23 February 1999 — This year's La Niña is one of the strongest in the past 50 years, according to scientists at the US National Weather Service's Climate Prediction Center. La Niña is the phenomenon of cooler-than-normal sea surface temperatures in the tropical Pacific Ocean, impacting on global weather patterns. La Niña conditions may last for as long as two years.

Forecasts show the present La Niña Pacific Ocean conditions continuing through June 1999, with greater intensity possible during the next few months.

This La Niña pattern began in May 1998. A rapid cooling of the near-equatorial waters in the central Pacific signalled the end of the 1997–1998 El Niño and the beginnings of La Niña.

El Niño and La Niña are extreme phases of a naturally occurring climate cycle referred to as El Niño/Southern Oscillation. Both terms refer to large-scale changes in sea-surface temperature across the eastern tropical Pacific.

The strengthening La Niña influenced weather patterns that sent Alaskan temperatures dipping to -74°F (-23.3°C) and wind chills to -90°F (-32.2°C) in late January and early February. It has brought flooding and heavy snow to the American West, warmth to the East, and extreme weather from South America to Asia, according to National Oceanic and Atmospheric Administration (NOAA) scientists.

"This La Niña provides the physical link between many of the unusual weather patterns seen recently in far-flung parts of the globe," said John Janowiak, a NOAA scientist.

The global La Niña impacts include heavy rains, severe storms and flooding in eastern Australia and southern Africa, drought in Kenya and Tanzania, flooding in the Philippines and Indonesia, and abnormal wetness in northern South America. The same regions suffered the opposite impacts during the 1997–1998 El Niño pattern.

"While parts of Alaska have experienced severe cold, most of the lower forty-eight states, especially those in the southern tier, have enjoyed record-breaking warm temperatures," Janowiak said.

The Alaskan cold snap can be blamed on persistent winds bringing bitterly cold air from north of the Arctic Circle, southward to Alaska. National Weather Service scientists say this circulation pattern is frequently associated with La Niña, which usually results in colder-than-normal winter weather over Alaska. Forecasters predicted the below-normal winter temperatures for Alaska as early as last September.

Scientists at the Climate Prediction Center expect wetter-than-normal conditions to continue through March over Indonesia, northern Australia and southern Africa. Wetter-than-normal conditions are likely to develop over northeastern Brazil and continue through May.
